eVerifyID

The most advanced ID and driver's license verification solution to accurately authenticate the document and identify potential fraudulent activity; using only the consumer's mobile device!

A must have for remote and touchless transactions. Capture, authenticate, and store applicant information without any handling of the applicant's ID or driver's license all in only a few seconds.

Instantly runs up to 24 different fraud and document authentication checks on the ID or driver's license, ranging from biometric technology to check the accuracy of the images to possible attempts of document tampering.

The most advanced product on the market today, powered by Mitek®, the industry leading multi-layered identity document verification platform.

Prevents potential loss as a result of fraudsters using a fake or tampered with driver's license on a test-drive, or with the submission of a fraudulent credit application.

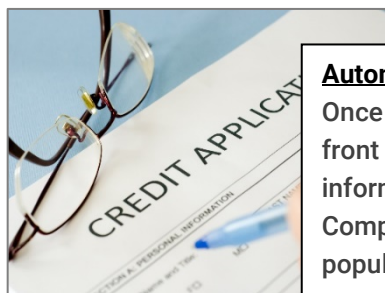

Multi-Layered ID Verification Process

Utilize as a stand-alone document authentication tool or incorporate into a multi-layered ID verification process including Red Flags, Synthetic ID fraud checks, and more.

In-depth Document Authentication

ID or License and image information is cross-checked using multiple layers of authentication and in-depth verification parameters, and returns either verified or unverified data in seconds.

Automatically Fill Credit Applications

Once the applicant takes a picture of the front and back of the ID or license, the information is populated in eCredit Complete and stored in the eVault. Auto population improves accuracy and processing efficiency.
